-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

### Status

- 1) ☒ Responsive to communication(s) filed on 25 July 2006.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-8, 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Couture et al in view of Capacity Control System. Couture shows the claimed system with the exception of the selector switch for switching between a high and low load capacity. Capacity Control System teaches selectively switching between a low load and high load capacity. It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the system of Couture to comprise a selector switch, as taught by Capacity control System, for switching operation between a high and low load operation. The system of Couture is capable of prevent lifting and lowering between the range, as set forth in claim 3, and permit functioning, as set forth in claims 6 and 7.

Claims 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Couture and Capacity Control System, as applied to claim 1 above, and further in view of Wacht et al. Wacht teaches a transport limit switch. It would have been obvious to one of ordinary skill in the art at the time the invention was

made to modify Couture to comprise limit switches, as taught by Wacht, for sensing the extension of his boom.

Claim 10 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitation of the base claim and any intervening claims.

Applicant's election with traverse of Group I in the reply filed on 7/25/06 is acknowledged. The traversal is on the ground(s) that both invention can be searched at the same time, thus there would be no burden to examine both invention. This is not found persuasive because even if searching both invention would be the same as stated by applicant, searching is only a portion of the examining process.

The requirement is still deemed proper and is therefore made FINAL.
